

SYSTEMS COMMUNICATIONS

SYSTEMS COMMUNICATIONS: Plays an integral role in building secure and effective connectivity between Military Service Corp forces. These systems cater to a wide range of communication needs in all military platforms including airborne, naval, mobile, and ground-based platforms. All equipment, technologies, radios, satellite communication systems, and security systems are designed to enable seamless, fast, and secure voice and data communication among users.

Systems Communications goals include:

- System concepts and platforms stay relevant as technology continues to rapidly evolve.
- Streamlining multi-layered plug & play architecture communication networks and platforms.
- Capacity, resiliency, and capabilities of integrated system suites.
- The convergence of geosynchronous capabilities across constellations.
