

## THE UNITED GALACTIC FEDERATION

The United Galactic Federation was founded by the collective alliance between the Andromeda, Arcturian, Pleiadian, Feline, and Sirius A and B races. The United Galactic Federation was structured and promulgated as an interstellar authority comprising thousands of planets and sentient races, dedicated to the propositions of the Equitable Laws of the Universe, knowledge, coalition of alliances, liberty, equality, enlightenment, and civilized resolution of conflict.

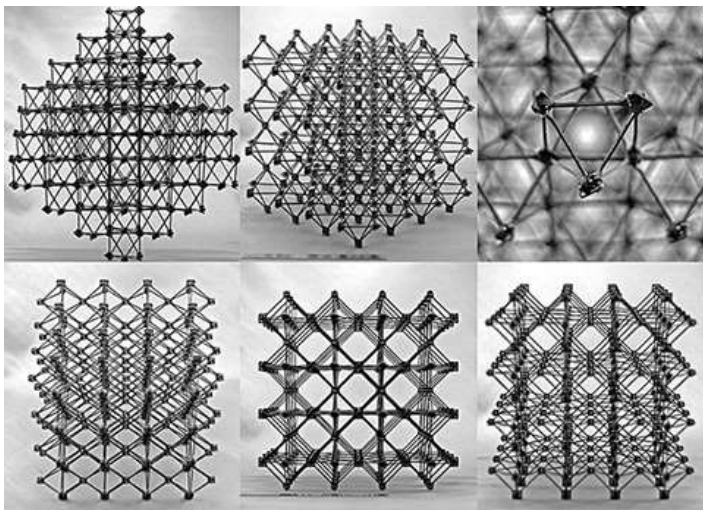

In the formal dissemination of the collective procurement and acquisitions, it was agreed upon to use the Pleiadian Worldbridging Environments to build and secure the foundation for continued collaboration amongst the races of the United Galactic Federation. This premise was based upon the efficient hexagon shape providing a backbone for the continued sourcing of the Federation's needs. In so doing, a commonality of architecture ultimately ensured the knowledge, coalition, equality, and resolution of combined assets and resources throughout the Federation.

The United Galactic Federation architecture is based upon the Worldbridging Environments Platform allowing all races to adapt, interact and benefit collectively with particular regards for conflict resolutions, diseases, genetics, science, technologies, cultural and social interactions, habitats, and environmental impacts. The Worldbridging Environment Platforms adaptively plug and play the addition of new planets, military Forces, processes, sciences, technologies, and resources into the combined knowledge and assets of the United Galactic Federation.

The core of the bridging platform details the military forces operations and staffing to provide structure, form, function, and support to all other Environment Platforms. These directed forces ensure the continuity, reliance, standards, and practices of the Worldbridging Environments.

Environment Platforms are first level categories defined as Asset and Distribution Corps, Exopolitics Corps, Immigration and Welfare Corps, Genetic and Medical Corps, Protocol and Liaison Corps, and Transdisciplinary Science Corps.

Within each category are the service sections which detail the relationships of disciplines and/or fields. And within each discipline and/or field are further defined details of processes, procedures, education, training, and other relevant data features and knowledge. The platform can expand and/or collapse to accommodate any knowledge or data driven application. Ultimately this hexagon honeycomb effect can

be stacked, layered, and reconfigured to automatically correlate and cross-reference every platform connection within the Federation foundation.
