

Humans have scanned and searched the cosmos for signs of other advanced civilizations in the universe throughout history. And believe they have found nothing.

At Omicron, we believe we have found everything. Our search has been more than curiosity and looking for extraterrestrials. It has allowed us to see the intelligence all around us.

As our expertise and consciousness in this field has expanded, it has invited the very things we have been looking for, into our awareness.

Saren Greeting from Pleadians:
Ae entae shen! Esrae asintah panermeri wioael.
Greetings! My heart is the Light of Source.

Ask us how you can become a member of the
Commonwealth and start changing the world

Omicron: "small o mikron" is an antonym of omega (constant to the end) and denotes the asymptomatic growth of a function (limiting behaviors). Its nickname stands for stealth (cautious by design in accordance with actions or movements).

OMICRON

RESEARCH * RECOVERY * INVESTIGATE

EDUCATION RESEARCH CENTER

Omicron develops, organizes, trains, conducts, and equips Omicron personnel in order to research, recover, and investigate Extraterrestrial Visitation Phenomena (EVP) and to provide standard practices and capabilities to interested or partnered organizations.

WHAT WE'VE LEARNED IN FORTY-FIVE YEARS

We are not hunters of the unknown, but rather gatherers and interpreters of the information they provide and we find all around us.

Everything has been laid out in order before us, all we need do is open our eyes and they show us the way.

We have located and mapped their portals and understand how they work.

We have watched them map our skies and we have mapped their routes and destinations.

We have created processes, policies, and spaces for them to interact and communicate with us.

We have learned from them and continue to apply that knowledge.

RESEARCH, RECOVERY, AND INVESTIGATION

We have the understanding, expertise, and knowledge that most researchers and investigators can't bring to the table.

Victoria S. Whitney – Commander – D.Sc. -Transdisciplinary Science and Engineer - Retired DOD U.S. Navy – Omicron Operations and Omicron Commonwealth

Lesley B. Doyle – Science and Nuclear Engineer Officer -Active DOD U.S. Navy – Executor - Transdisciplinary Science Service Corp

Jim M. Hamilton – Technology and Equipment Officer – JB Hunt – Executor - Strategic and Distribution Service Corp

Sarah E. Church – Genetic and Medical Officer – Nuclear Engineer - DOD U.S. Navy – Genetic and Medical Service Corp

Shylo E. Shorthouse – Science and Nuclear Engineer Officer - Active DOD U.S. Navy – Executor - Immigration and Welfare Service Corp

Kayla Spencer – Hospitality Officer – Specialist - Protocol and Liaison Service Corp

OPPORTUNITIES

It is of utmost importance that we not turn the reigning authority of Extraterrestrial Visitation Research, Recovery, and Investigate solely over to Defense Departments and Intelligence Communities, who will only determine the Extraterrestrial Visitation as a national security threat. Given this fact, full disclosure would never be an option, much less attained.

Omicron has developed a viable plan to unite each and every effort into a global framework under the structure of a Commonwealth as a common governing body. Our plan examines and suggests the organization, training, doctrine, skills, and experience provided by the various individuals and teams throughout Planet Earth, in which, we can standardize, train, and organize expertise and valuable resources, as well as, knowledge to leverage global standards and cohesive referenced data sources for all Research, Investigative, and Recovery aspects of Extraterrestrial Visitations. To ultimately create a world, in which Extraterrestrial Visitors are a part of our society and history in the making.

Omicron works to build strategies, effective systems, and environments to promote contact and visitations. We build it and they respond.
