

Syntax, Semantics, Encoding, and Messaging Platforms provide for the research, development, documentation, and implementation of linguistics, exolinguistics, common language, and messaging, by understanding the contents of documents, the contextual nuances of bodies and languages, the technology used to accurately extract information and insights contained within the languages and linguistics, as well as, categorize, organize, using Syntactic analysis (syntax) and semantic analysis (semantic) according to species.

Communication and Outreach Platforms provides communication, outreach and engagement strategies and actions to disseminate to a wide range of audiences specifically aimed at raising awareness and revealing relevance in accordance with the long-term strategies; focus communication on priority constituencies, events, and activities while making best use of existing resources; create a common understanding of the key messages to be communicated to the various stakeholder groups and constituencies; and set out key actions for implementing the strategies.

Etiquette, Customs, and Beliefs Platforms researches, analyzes, evaluates, documents, and implements systems of rules and conventions such as Codes of Ethics and Codes of Conducts that regulate social and professional standards and behaviors.

Public Affairs Platforms are based on situation analysis, goals, alliances, audiences, messages, channels and impact measurement that are attuned to one another and to the context of the Omicron Commonwealth Charter Agreement. Each objective serves as a thread throughout the different components of the plans of Omicron Commonwealth and the Service Corps. The Public Affairs Platforms plan and determine the terms of goals, time and costs to be flexible enough to withstand exogenous shocks and crises. .
