OMICRON JOINT TASK COMMITMENT BRIEF

Omicron: "small o mikron" is an antonym of omega (constant to the end) and denotes the asymptomatic growth of a function (limiting behaviors). Its nickname stands for stealth (cautious by design in accordance with actions or movements).

CONCEPT ABSTRACT

If we build it, they will come! It begins with a thought, generates with energy, culminates with intention, and symbolizes our willingness to participate and grow beyond the critical lenses of our past.

Right now, our future demands that Planet Earth develop and implement a globalized, standardized approach to Extraterrestrial Visitations. Up until now, all attempts and indicators point to a separatist and disparate approach in the investigation, research, recovery, data collection, and analysis, much less the intended conscious ability to confirm or deny, the existence of Extraterrestrial Visitations.

In a time of disclosure, it begs us to implement a globalized framework, in which co-referenced relationships of infinite ideas, data, resources, and values culminate into a single global, standardized scheme. It is necessary for the world to take a transdisciplinary approach to such an undisciplined subject.

A joint approach between government entities, countries, states, provinces, and private sectors is always more successful than a single entity controlling a single agenda. While we realize this concept is a major undertaking, we must also understand the extraordinary implications and long-term benefits that will unfold and shape our world into a new age of knowledge and understanding, ideologies never before realized, and most certainly open the door to our universe of existence. An undertaking of this magnitude will unite our knowledge rather than bolster our fears of one another. It sets goals for humanity becoming part of a larger system of knowledge rather than a confined system of ignorance. We must literally become a united, uniform, web of practice with a common goal.

A truth can only become self-evident when the tacit knowledge is borne of defensible criterion and valid of determinate sources to confirm our cognitive awareness. Therefore, it is not only necessary, but demands we have a formal system in place before the execution of disciplines, rather than after the insurrection of situations and events.

INTRODUCTION OF OMICRON COMMONWEALTH

Commonwealth Definition: A governing International Community founded on law and united by treatise agreement of the people for the common good of Extraterrestrial Visitations and the populations of Earth.

OMICRON JOINT TASK COMMITMENT BRIEF

Throughout history, humanity has been on the threshold of not only discovering how our existence came to be on this planet, but ultimately acknowledging the higher concepts of life in the known Universe. While we may believe the Universe is infinite in many ways, our knowledge of it will never be.

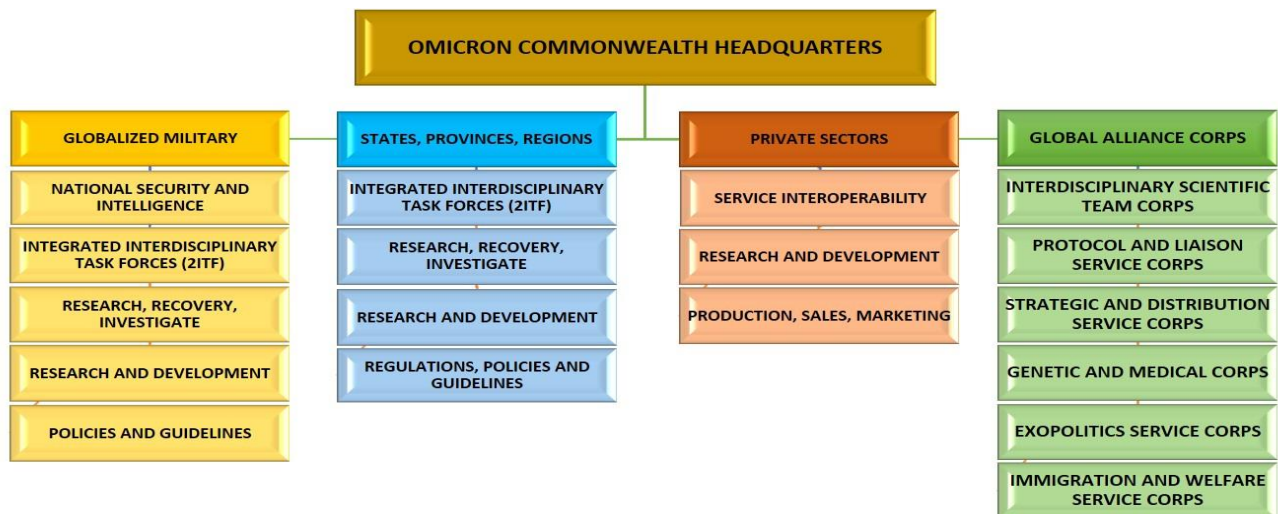

On Planet Earth, we've unfolded the miracles, mysteries, and science of life, air, water, and atmosphere, within the confines of what we can understand, but what of those biospheres outside the boundaries of Earth and what we know. It didn't take much for us to dream and speculate the range of life forms from simple Prokaryotes, to sentient forms upon our own planet, so why would we not imagine intelligent beings that may already be traversing space with advanced technologies.

If we are to have determinate knowledge and legally recognize the magnitude of implications and potentials from that determinate knowledge of Extraterrestrial Visitations, then we must construct and implement a formal system from which to operate. Validity, confirmation, and truth can only survive and engage support within a formally recognized framework.

This Omicron Joint Task Commitment Brief (OJTCB) proposes the formation of a closely integrated global Omicron Commonwealth that would align in allegiance with Planet Earth as a whole rather than individual entities. Said Omicron Commonwealth would consist of recognized members, who formally commit to the Omicron Commonwealth Treaty from within the Global planetary regions. The most important role of the Omicron Commonwealth would be in strengthening advocacy, determine global goals, and engagement efforts to establish the determinate knowledge and thereby the truths of Extraterrestrial Visitations and the corpus of changes that will most assuredly become evident throughout the process.

The Omicron Commonwealth would replace old indoctrinations, old ways, and outdated views. It would become a new platform for sharing knowledge, diversity, collaboration, and social cohesion, by uniting, mitigating, and adapting real potentials, challenges, opportunities, and realities facing the populations of Earth. Under the Extraterrestrial Visitation framework, the Commonwealth would become the overarching authority for concerns, issues, and decision-making processes.

The Omicron Commonwealth also opens the door to potentials and opportunities that may await Planet Earth in the Universe. An established formal system is much easier to integrate, unite, mitigate, and adapt to other formal systems.

Omicron Commonwealth Planned Framework

OMICRON JOINT TASK COMMITMENT BRIEF

INTRODUCTION OF INTEGRATED INTERAGENCY TASK FORCE

This Omicron Joint Task Commitment Brief (OJTCB) proposes the formation of a closely Integrated Interagency Task Force (2ITF) between the Sovereign States of these United States, Federal Agencies, and other Global Partners and Stakeholders to Research, Investigate, and Recover critical mission data and evidence associated with Extraterrestrial Visitations, whether as an Unidentified Aerial Phenomenon (UAP), Unidentified Flying Object (UFO), Unidentified Submersed Object (USO), or Unidentified Foreign/Alien Technology (UFAT).

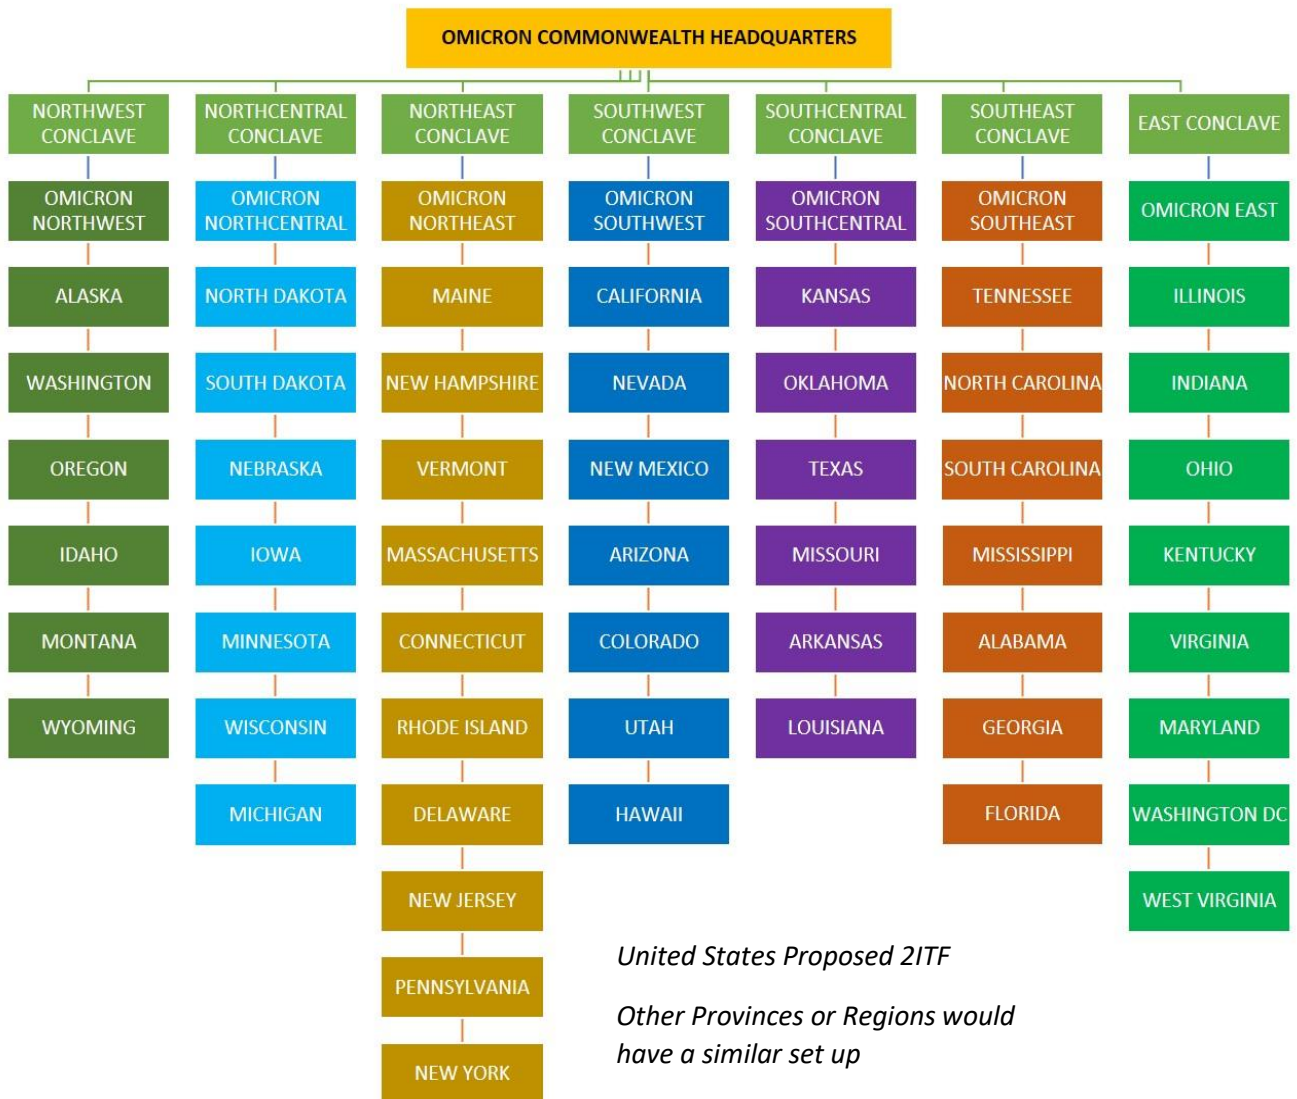

Currently, methods and efforts challenge solo entities and private sector businesses to provide maximum capability with minimum resources. In order to meet this challenge effectively, the United States must become a leading and guiding source, while taking full advantage of the synergy provided by the disclosure of purported Extraterrestrial Visitation activities.

These well-trained, combined Task Forces could be employed and deployed in a wide variety of Research, Investigation, and Recovery missions that frequently change and evolve during development and

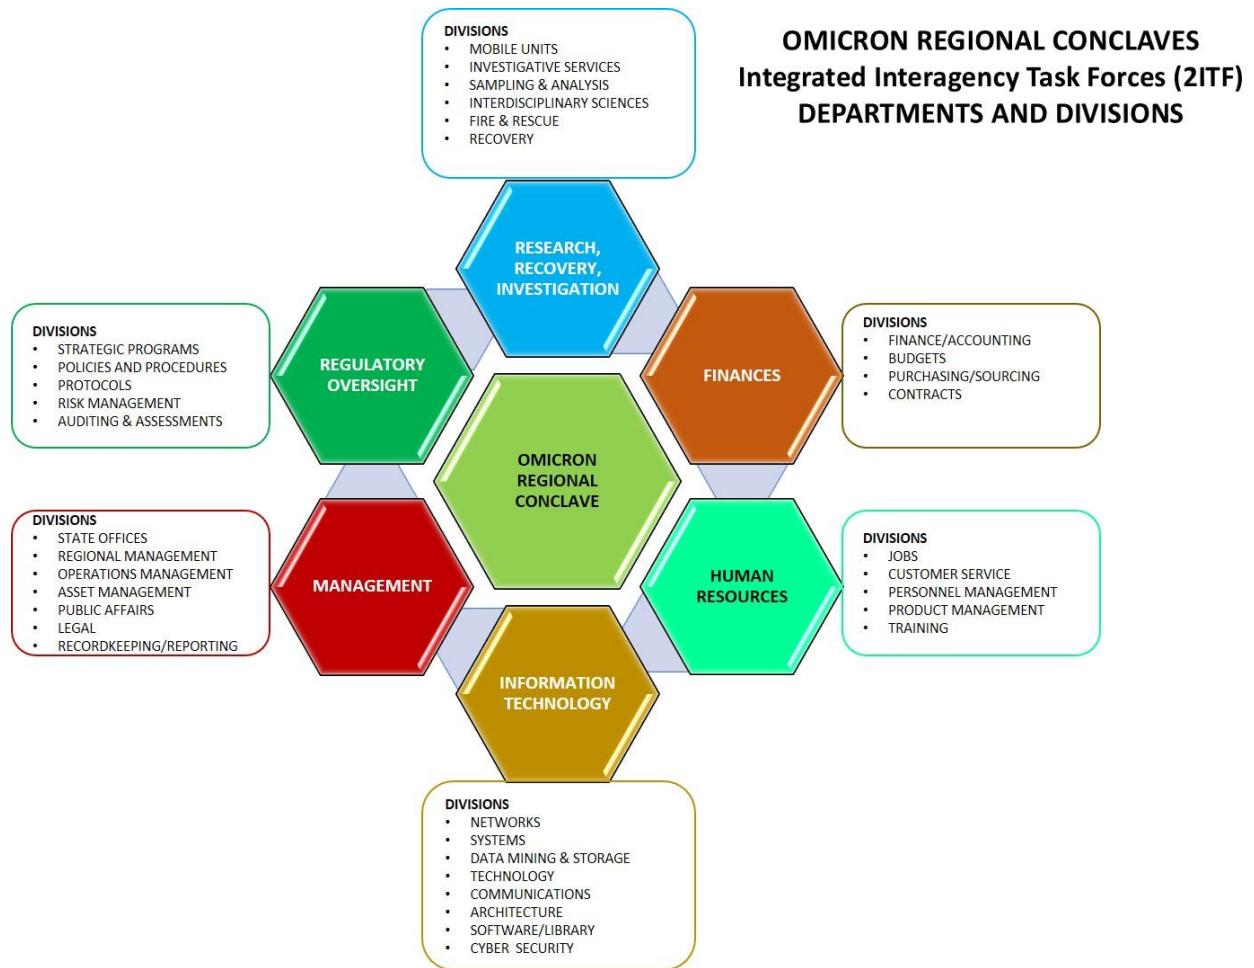

OMICRON JOINT TASK COMMITMENT BRIEF

execution. Formation of the 2ITF is one of several options to standardize, train, and organize expertise and valuable resources and knowledge to leverage global standards and cohesive referenced data sources for all Research, Investigative, and Recovery aspects of Extraterrestrial Visitations. This OJTCB examines and suggests the organization, training, doctrine, skills, and experience of the Integrated Interagency Task Forces (2ITF) formed within each of the geographically tasked unified resource locations of Planet Earth.

OMICRON CONCLAVE REGIONS - Integrated Interagency Task Forces (2ITF)

OMICRON JOINT TASK COMMITMENT BRIEF

DEFENSE DEPARTMENTS AND INTELLIGENCE COMMUNITIES

This OJTCB is addressing the purported development of a Defense Department and Intelligence Community office, whose mission statement focuses on Unidentified Aerial Phenomenon (UAPs) and have defined their mission as providing the resources, analytics and attention focused on National Security issues and the recovery of technologies. For nearly seventy years the US government has engaged in an extensive "official effort" of disinformation, intimidation and tampering with evidence in order to maintain a non-disclosure policy about extraterrestrial presence.

It is not in the best interest to the people of Planet Earth, that the Defense Departments and Intelligence Communities become the overriding authority for such a complex field of study and investigation regarding Extraterrestrial Visitations. This OJTCB suggests a very strong conflict of interest between the Defense Departments and Intelligence Communities and neither party could perform their duties appropriately because it would mean betraying their interests to one of the parties within the situation. Therefore, full disclosure would never be an option, much less attained.

Defense Departments and Intelligence Communities have long been stigmatized with serious deficiencies in mission planning, command and control, and interservice interoperability, as well as, misrepresenting

OMICRON JOINT TASK COMMITMENT BRIEF

and withholding critical data, discrepancies or misuse of analytical and data reports, incident cover ups, and non-disclosure, which has succeeded in adverse effects and distrust towards these Government Entities throughout the communities and populations of the World. If we are to provide the People of these United States, much less the populations of Earth, with full disclosure regarding Extraterrestrial Visitations, then it is necessary to remove the stigmatism of the singular aspect to National Security and move this into the areas of transdisciplinary studies.

This OJTCB further notes that Defense Departments and Intelligence Communities build their core from subordinate component commands augmented by specialists and other service component resources with the core mission of National Security. It should also be noted that commands choose their core headquarters based on ability to perform specific missions and must augment from other services appropriately. This OJTCB, therefore concludes that Defense Departments and Intelligence Communities currently lack the ability to train and organize effectively for Research, Investigation, or Recovery of Extraterrestrial Visitation Incidences or Events. This OJTCB further suggests that continued improvement through a global transdisciplinary approach is required because current doctrine for training Defense Departments and Intelligence Community joint task forces is immature and the training programs implementing the doctrine are relatively new.

BENCHMARKS FOR AN INTEGRATED INTERAGENCY TASK FORCE

The 2ITF would design, implement, and operate to the premise that Science is never about one main idea, but rather the culmination of thoughts, theories, and ideas of multidisciplinary data presented as regular (meaning varying around some theoretically 'stable' equilibrium), random (meaning completely unpredictable), or chaotic sources and systems. Therefore, all policies, guidelines, research, findings, criteria, and data, must be used to coordinate the coherent integration of results into scientific discourses, and related transdisciplinary fields, in advancing our comprehension, and innovating this field of Extraterrestrial Visitation research, with an independent voice of free information.

All globalized 2ITF partners would identify challenges, provide considerations and expertise for future scientific study designs, and recommend courses of actions to define multi-sectoral and multi-faceted research in a variety of disciplines such as:

- A. Global Alliance Interdisciplinary Scientific Teams to engage in the study of Extraterrestrial Visitation phenomenon using global standardized procedures, methodologies, and protocols.
- B. Global Alliance Research and Development Service Corps to study the material, form, use, and function of recovered technologies, as well as, develop future form, use, and functions of technologies.
- C. Global Alliance Protocol and Liaison Service Corps to study, develop, and maintain high-quality, standardized services, uniform set of rules, governing codes of behavior, and strategic vision protocols between Extraterrestrial Visitors and internal Earth communities.
- D. Global Alliance Strategic and Distribution Service Corps to study, design, and implement uniform set of rules, governing codes of production, use, marketing, storage, and distribution of technologies released from Research and Development Service Corps recovered during Extraterrestrial Visitation investigations.

OMICRON JOINT TASK COMMITMENT BRIEF

- E. Global Alliance Genetic and Medical Corps to research, study, develop, implement, and maintain high-quality, standardized biological and genetic services, standardized medical services, uniform set of rules, governing codes of conduct and behavior, and strategic environmental, safety and health protocols related to Extraterrestrial Visitors and the populations of Earth.
- F. Interdisciplinary study of processes involving energy consumption, energy harvesting, electromagnetic waves, zero-point energy, dark energy, and new fuel methods.
- G. The research and exploration of Interdimensional travel or the interdimensional hypothesis (IDH or IH), in which, UAPs, UFOs, or related events involve visitations from other realities or alternate dimensions that coexist separately from our reality.
- H. Global Alliance Exopolitics Service Corps to study, develop, and implement as a new synthesis of transdisciplinary study by key individuals, political institutions, academia, and processes associated with extraterrestrial life.
- I. Interdisciplinary Studies of the Extraterrestrial Hypothesis (ETH), extraterrestrial life, genetic and cultural intervention, and the Extraterrestrial Visitation contact/experience.
- J. Develop civilian, scientific, anthropological, and academic research studies to include Hyperdimensional Hypothesis (HDH); the Ultraterrestrial Hypothesis (UTH); or the Superintelligence Hypothesis (SIH).
- K. Globalized Military UAP investigations that postulate unacknowledged unconventional exotic technology possessed by foreign or domestic nations, exhibiting the behavior of some UAP cases.
- L. Globalized Military UAP investigations and threat mitigation from the standpoint of Planetary Security and Intelligence.
- M. An interdisciplinary study of cultural impact between extraterrestrial contact and the countless changes to terrestrial science, technology, religion, politics, and ecosystems resulting from contact with an Extraterrestrial Visitation.
- N. Global Alliance Immigration and Welfare Service Corps to study, design, implement, and maintain high-quality, standardized documentation, policies, counseling, advocacy, support services, relocation, and deportation services between Extraterrestrial Visitors and the populations of Earth.

SUMMARY

To an observer from the outside, there may be concerns about our current state of affairs and the behaviors exhibited by the inhabitants of Planet Earth. In many cases, it would be understandable that there would be barriers to interpreting cultural differences, languages, and communication, much less, the visible conflict we tend to exhibit towards what we don't know or understand.

If we are to encourage intelligent civilizations beyond our world to interact with us, we must begin with building a system to not only acknowledge, but convey that we have matured enough to participate in the advanced knowledge of these civilizations.

In so doing, this action would provide us with the unprecedented steps to confirm the authenticity of Extraterrestrial Visitations and the widespread disclosure ringing our proverbial doorbell. It will enter us into a new age of fundamental principles, expand a progressive universalist approach characterized by a responsible search for truth, and indoctrinate the populations of Earth into the potentials and credibility of life in the Universe. It would allow us to answer our own call to our existence.
