

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.

The Regeneration of Energy in the States of Conversion and Transformation

The Eternal (Pale Silver) Life Current, that is made up of the combined frequencies of Pre-matter dimensions 10, 11 and 12, are what compose the Density-4 fields of Hydroplasmic Liquid Light, most often called the “Astral Field.” This Life-Force Current perpetually feeds energy and consciousness into the Time Matrix of which each of us is a part of. Because a balance must be maintained for this to exist, we must have a firm understanding of cycles and the importance they play in all things seen and unseen.

Just as everything is energy, we also know there are cycles in everything in the universe. The absolute universality of that law of periodicity, of flux and reflux, ebb and flow, which has been observed and recorded in all elements of all nature is a fact so common, so perfectly universal and without exception, that it is easy to comprehend that in it we see one of the absolutely fundamental laws of the universe. It is this law of cyclic recurrences that proves to be the principle or regulator for timing the events and operations of everything, visible and invisible, in mind and in matter, in time and in space. The Laws of energy, radiation, frequency and the correlation between tone, form, movement, color, geometry and an idea are key components to understanding the energetic cycles.

In order for us to understand this concept we must understand the process by which it exists. There are six primary elements of the Keylonta Codes. These elements are:

1. Partiki
2. Partiki Grids
3. Keylons
4. Keylon Codes
5. The Crystal Body or Morphogenetic Field (MF)
6. Light – Symbol Codes

We already learned that the morphogenic field is an electro-tonal, energetic substance that is composed of specific patterns of frequency. This morphogenetic imprint sets the pattern for the creation of a form within a dimensional field of energy substance and holds the instruction and design for the creation of form-building in a type of digital or electronic encoding known as 'Keylon Codes'. Keylon codes are the language or “**Symbol Codes**”. They are the intrinsic, interior geometric-electric and magnetic structures that create the foundations for all form and structure within all forms of dimensional systems and realities.

They occur in different frequencies throughout many dimensions simultaneously. Keylons build the frequency fields of sound and light upon which the entire energy Matrix is structured. The unified field of energy is composed of groups of crystalline keylons and also the morphogenetic template of electro-tonal and electro-magnetic energy upon which the human DNA, genetic code, physical body, bio-energetic chakra system and multidimensional aspects of consciousness or the spiritual body are built.

Keylon Codes are complex grouping of Keylons that direct the contours of entry upon which forms are built. Partiki & Partiki Grids set the base forms of energy, Keylons add more substance to the forms and Keylonta Codes further “flesh out” the energy structure upon which particles will manifest. The substance of **Partiki**, Partika and Particum, **Partiki** Grids and Crystalline Keylon Codes serve as the template for matter.

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.

A Partiki Unit is a unit of electro-tonal thrust, which comes out of the Yunasai (the morphogenic matrix of Alpha and Omega in which the Unity of Consciousness resides). The Partiki starts as one and undergoes fission when it hits the frequency bands of the (first) 15-Dimensional system. It then replicates itself and the original breaks apart. The original pattern of that tone remains in the replication.

A Particum is an Ultra-Micro Particle has a base magnetic receiving/drawing energy. The Particum is a Partiki unit but the Particum Partiki is slower moving and contains half of the electrotonal (which is electrified sound trust or force) of its twin Partiki sub unit. (It pulsates half as fast). They make up the particles in all universes, the sub-atomic units are composed of Particum-Partiki units. The other Partiki sub particle are called Partika (PKA)

The Partiki that comes in first breaks up or polarizes into two pieces, a Particum (PCM) and a Partika (PKA). They are created at the same time. They flash on, one in our universe and one in the parallel universe. This happens so fast that we can't perceive it.

Because the Partika has twice the amount of thrust or force as the Particum and is moving away from the Morphogenetic Field, it starts to tow the Particum and makes it spin, reverse direction and go back to fuse with the Morphogenetic Field.

The Particum flashes off in our universe. It expands the Morphogenetic Field, adding to it. The Morphogenetic Field then becomes more of a thrust than the Partika Unit, causing the Partika to spin and pulling it back in. The Partika then fuses with the Particum particle inside of the Morphogenetic Field. Now both particle and anti-particle have flashed off.

The perpetual motion of "fission" and "fusion" (separation and replication) from Partiki units into *Partika* and *Particum* units is called "**Partiki Phasing**" and is the basis of what is known as the Divine unification. *Partiki phasing* results in a "flashing on and off" of units of consciousness which, when grouped together, form "flash-line sequences". Flash-line sequences make up the structure of ALL creation, ALL Life Forms, including what we may see as protons, neutrons and electrons in our Reality Field (or hologram).

When both have flashed off and fused, it releases a burst of energy. It sends a quarter of its thrust back toward the Yunasai, creating a backflow that pulls away from the dimensional matrix that we are in. (This would be the current that would take us back to Yunasai). When the backflow is created it sets off another act of fission within the Morphogenetic Field. Then the particles that come together will cycle and break apart again.

The Partiki Grid resembles bands of light and sound that are invisible to our perceptions but exists beneath and through all matter forms and all forms of consciousness. The Partiki Grid is a grouping of Partiki Units by like polarization meaning Particum Units group together with more Particum Units. The grids pull in more Partiki Units that cluster together and form Keylons, sort of like building layers upon layers.

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.

Think about this....Particum & PartikA universes are intertwined and taking place in the same space but on different pulses of consciousness (flashing on and off). The PartikA universe is pulsing twice as fast as the Particum universe, which in turn changes the angular rotation of particle spin. That then moves both universes and beings in the universes out of each others' perception.

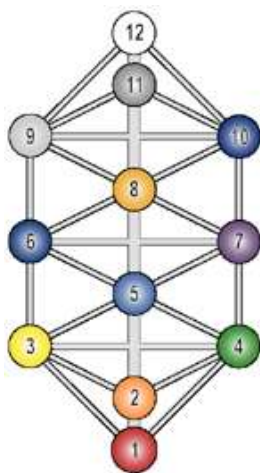

Tri-phase groupings of Partiki Units form patterns of Scalar-wave and Tri-tone wave interrelationships that create crystallizations of energy called Keylons. Groups of Keylons continue to accrete, forming complex Keylons arrangements called Keylon Codes, through which the Manifestation Template is progressively built up from Ante-matter through various stages of matter density, beginning with Pre-Matter Substance, the first density of Liquid Silica Hydro-plasmic energy to emerge into externalized form.

The Keylon Codes direct the flow of energy-Partiki-units through a form into more specialized patterns. They are complex patterns of frequency, electro-tonal energy, formed into interwoven, geometrical crystalline patterns that are the templates of "living (conscious) light and sound. They are the final step between energy-consciousness and pre-matter substance. (Where matter solidity or density starts to happen) They set the pattern for the DNA and body rhythms.

All matter forms and consciousness identity as built upon complex groups of Keylon Codes. It requires the keylon codes to transition from pure consciousness to pre-matter. As we evolve upward into higher dimensions we are assembling progressively more complex Keylon Codes into our Partiki Grid. The more Keylon Codes you have the more consciousness you will be able to bring or sustain.

The grids are templates for all consciousness and matter forms. The Universe contains massive particle grids with the energy grid and all being and matter forms have personal grids which are formed within and connected to the grid of the whole. These result in the templates of all creation.

In the case of human beings, the Kathara template reveals the Anatomy of Creation, Core Structure, the blueprints and interconnectedness of all matter forms. The Kathara Framework enables the Core Programming Center of all life and all life conditions, to be directly accessed, to provide restoration, revitalization and regeneration of the natural, Divine, imprint for life.

The word **KATHARA** (**KA**-Light, **THA**-Sound, **RA**-One) refers to the Core Structure of Morphogenetic Fields, the Holographic Templates of Sound-Light & Scalar Waves that serve as the blueprints on which matter manifests. Other energetic holistic systems utilize various "different" levels of the morphogenetic field, from the Chakras & bio-energetic Auric field, to Meridians & Axiom A & B tonal lines, to facilitate healing limited only to the level of the blueprints of physical form.

The KATHARA GRID is, therefore, the foundation on which the Axiom Grids, Merkaba Fields, Auric Field Levels, Subtle Bodies, Chakras, Meridian Lines, physical matter systems and Multi-dimensional Levels of Consciousness manifest. The Kathara provides direct access to the intrinsic, core basis, original causal condition of

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.

disease & its myriad manifest forms. All original core, conditions are manifest as electro - tonal -scalar programs of "FIRE LETTERS and GEOMANTIC CODES" (these are the veca codes which function as Scalar Wave Guides). Fire Letters and Geomantic Codes direct the formation and operation of the morphogenic fields and, thus every kind of being is built upon them. This in turn provides the process for evolution.

There is an intimate connection between our spiritual aspect, our higher dimensional aspects, and our consciousness moving through the physical body. Each of us can have a wonderful level of developed consciousness in the higher dimensions but if we have a neurological structure that it is not able to handle the current of all that electrical information we won't have access at the higher conscious levels. Keylonta gives us the tools and understanding of our parts enough so we can start to expand the potentials of this physical body, so we can bring more of our consciousness and awareness, so we can bring more of our higher aspects into manifestation here. This means our evolutions are extremely important.

Evolution is the process of building up more complex Keylon Codes to increase the consciousness of any particular identity. You can do this consciously (more rapidly) or just let evolution take its course. The process of de-evolve is to release Keylon Codes from any particular identity. You are either building Keylon Codes or tearing them down. Nothing is static.

The process of our evolution is much simpler if we understand that we have these units and that there are things we can do with the energy directed through our minds that can build into our own grids more complex **Keylon Codes** which will allow more of our highest consciousness to come in to our bodies and if we progress with this it will lesser the density of our bodies. This is how dimensional ascension occurs, how spiritual evolution and biological evolution occurs. What it means to evolve and to complete our evolutionary process is to evolve our **Keylon Codes** so high (so many complex codes) that we no longer manifest. We vibrate so high as a consciousness to manifest in the lower density matter form.

What we are really aiming for in the process of evolution is coming to the point where we evolve out of biology and back into the higher states of being that we came from in the first place. This is what evolution is about. This is the pattern, the purpose, and it goes for species all the way down to the individual. And we can become conscious of this process by understanding how this process occurs.

Based on the process that we just heard, we know that the universe is predictable patterns of harmonically related oscillations which determine the structure of everything from galactic clusters to subatomic particles. The keylonta codes and light symbol codes translate the language of these oscillating energies (meaning cycles) into structural realities and unlimited forms of information and data. Likewise, everything within the physical body and more importantly the morphogenic fields are carriers of information. It is due to this reality that our energy is synced to the universal oscillations and provides us with something akin to an internal energetic clock. And this is why it is important for us to understand cycles.

Cycles are not patterns. Patterns are recurring forms. Some patterns can be changed if the right process is applied such as a behavior. Cycles on the other hand are a series or complete set of repeated

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.

sequences or prophetic order of design. Cycles can contain or encompass patterns, but patterns do not encompass cycles. Cycles are entrained in the rhythmic frequencies. Patterns on the other hand are the result of those entrained frequencies.

The six principles of cyclic rhythms

1. Everything is a manifestation of intelligent energy
2. This principle can be explained as the existence of correspondence or analogy among all things. For instance, there is a relationship between idea, tone, form, movement, color and number. There are correspondences among the chemical elements in the periodic table, among the colors of light and between natural processes such as: birth and death, the ebb and flow of the tides, the changes of the seasons, the ebb and flow of the inner life of all beings.
3. Nothing is absolutely still. The vibrations of matter, energy, mind, even of the spirit are at different frequencies which increase as they move from matter towards the spirit. There is a multitude of types and levels of vibrations according to their frequencies. For instance, we can study the vibration of light, sound, electricity, magnetism, the vibration of matter in its different states, in various organisms.
4. Everything in nature is dual and polarized. Duality is a basic Universal Law. For instance, there exist masculine and feminine principles in nature and positive and negative electricity. The earth, the human body, plants, eggs, crystals, etc. all have two poles; they are polarized.
5. Another Universal Law in nature is rhythm or periodicity. Everything in nature is rhythmic. For instance, there is a rhythm in the vibration of light, in the changes of the seasons, in the ebb and flow of the tides. There is also rhythm in the movements of the earth: the terrestrial axis makes fine little vibrations which form a whole circle around the poles for 25,000 years. Periodicity exists in the movements of the comets, in human life, in human history, etc.
6. All things in nature are similar and related to each other on the basis of unity. For instance, although the chemical elements seem very different at first, they are all based on electrons and condensed ether. All elements in reality are only different combinations of the same electrons. The relationship is more obvious with things in close connection to one another, but with those further apart, the connection simply lies deeper.

Food for thought.....Some cycles seem to be synchronized with one another because they rise and fall in the same amount of time, and in the same time-frame.

Out of the ocean of time and forth from the ocean of life, goes the manifestation of the human races unto Life and Light. Written it was of old, in the most ancient of books. But the understanding of it is concealed from the eye and the brain.
