

MILITARY SERVICE CORP

MILITARY SERVICE CORP: Omicron Commonwealth and the Military Service Corp are constitutionally the same entity. The legislative branches, Service Corps, Omicron Commonwealth properties and interests, of Omicron Commonwealth are administered by the Military Service Corp, under the laws of the Omicron Commonwealth Charter Agreement and jurisdiction. The Military Service Corp builds teams, experts, and fields of study that focus on integration of capabilities and overlapping operations to defend the Omicron Commonwealth interests, protect the joint forces, and enable freedom of action, strength, and opportunities.

KNOWLEDGE: The Military Service Corp is an interdisciplinary field, that focuses on assertive forward deployment, electromagnetic spectrum strategies, innovative technologies, diplomacy and engagement, resiliency, capacity building, maneuverability, sustained integration and capabilities, and public policy with regard to the cultures, paradigms, actors, institutions and processes, associated with the enculturation of extraterrestrials and humans.

CONCERNS AND ISSUES: The future belongs to those who are able to discover, plan for, communicate and adapt to the evolving landscape by leveraging competency as a cultural transformation, sustainment and accountability'

ASTROCONVERGENCE DISCIPLINE: There will be many uncharted territories concerning knowledge, science, and technologies that will encompass a multitude of possibilities, both natural and artificial, and will undoubtedly change our fundamental theories of physics, chemistry, and biology. It will require the integration of knowledge, methods and expertise from across Astroconvergence to solve troublesome problems, especially those focusing on Omicron Commonwealth and Military Service Corp needs. It has five primary characteristics:

- Knowledge, technology, and people, as well as, natural systems are increasingly coherent and complex, and new systems must continuously be reviewed, updated, integrated, and formed at their interfaces.
- Problem-solving strategies must be understood, created, and transformed across systems to reach common goals.
- Use a deep integration approach to previously separated fields, communities, and modes of thinking, to form and improve a new system, from where solutions diverge to previously unattainable applications and outcomes.
- There is always a potential to create positive sum solutions because complex systems are governed by the principle of multidimensionality, which maintains that opposing tendencies not only coexist and interact, but also form complementary relationships.
- Change happens due to interaction between elements, agents, components, processes, or new knowledge in the system.

DISCIPLINE	SCOPE
GALACTIC FORCE	The Galactic Force develops the Dragon Spirit, acquires military space systems, organizes, trains, and equips forces in order to protect Omicron Commonwealth and allied interests in space and to provide space capabilities to the Military Service Corp joint forces.
SYSTEM COMMUNICATIONS	The Systems Communications develops the Dragon Spirit, involves all aspects of sensors, systems and technologies essential to connecting and controlling communications or conveyance of information across the Military Service Corp and Omicron Commonwealth.
LAND TO AIR FORCE	The Land To Air Force develops the Dragon Spirit, prepares and employs forces within this strategic environment to determine intent, opportunity, capability, or vulnerability with unsurpassed velocity and precision, and provide mobility to rapidly supply, position, or reposition joint forces, and to hold at risk or strike any target, safeguard joint freedom of action, and create swift, decisive, precise effects across Omicron Commonwealth jurisdiction.
MOBILE FORCE	The Mobile Force develops the Dragon Spirit, and is responsible for managing operations for the strategic preparedness, rapid deployment, and response to transport, install, operate, maintain and protect telecommunications, logistics, facilities, and operations assets in support of planned operations and events, or in response to disasters.
GROUND FORCE	The Ground Force develops the Dragon Spirit, provides readiness measures, forward deployment, as well as, efficient and effective methods to assemble, deploy, and control tactical elements and operations on the ground.
LAND TO SEA FORCE	The Land To Sea Force develops the Dragon Spirit, readiness, mobility, and forward deployment over and under the seas designated for naval and amphibious operations and warfare

At the Center of each Service Corp is the Service Corp Hub for Accounting Services. These services are the measurement, processing, communication, and economic activities of financial and non-financial information, and the language of business synchronously linked throughout the Service Corps and Omicron Commonwealth.
